

## HAVE YOU VIEWED THE NEW SESSIONS ON OUR WEBSITE?

### Schizophrenia

with Dr. Adrienne Lahti

### Fear & PTSD

with Dr. Kerry Ressler

### Intergenerational Trauma

with Dr. Brian Diaz

### Stress

with Dr. Carlos Balaños

### First Episode Psychosis

with Dr. Oliver Howes

### Childhood ADHD

with Dr. Philip Shaw

## DR. LLOYD SEDERER FEATURES NNCI IN THE HUFFINGTON POST

*"Instead of approaching addiction as a laundry list of signs and symptoms... a doctor can now consider the underlying brain mechanisms driving the self-destructive behavior."* - Dr. Lloyd Sederer.

Dr. Sederer wrote an in-depth article on one of NNCI's learning modules, *Talking Pathways to Patients: Addiction* on his blog at the Huffington Post. You can read "How Doctors Think: Addiction, Neuroscience and Your Treatment Plan" here: <http://huff.to/1ltyZL>

## SO YOU SIGNED UP FOR THE LEARNING COLLABORATIVE, WHAT NOW?

In developing the National Neuroscience Curriculum Initiative, we recognized that it would be impossible for any program, on its own, to create a comprehensive curriculum for teaching neuroscience. Addressing the breadth and depth of the field would require educators and researchers coming together, across institutions, to develop a comprehensive set of shared teaching resources. As we continue to expand the resources available online, we also imagined how much you, as a group, might benefit directly from one another. This has been our main goal in establishing a learning collaborative. As we move forward, we have been thinking about many different ways we might help facilitate your direct collaboration. For example, we've considered the possibility of developing a shared listserv to allow those of you who are running neuroscience courses (or want to run courses this year) directly connect and share resources and ideas. Alternatively we might pair up new programs with those who are already running NNCI modules. We aren't sure what would be the most useful to you and would love your feedback! If you have run an NNCI module and/or are planning to build this into your curriculum this year please let us know how we might be most helpful in connecting you to a larger community dedicated to this shared mission.

## NIMH DIRECTOR, DR. TOM INSEL, WRITES ABOUT NNCI

*"By changing the training of the next generation, we not only prepare for the future, we create it."* - Dr. Tom Insel.

On May 26th the director of the NIMH, Dr. Tom Insel, wrote a post highlighting the importance of bridging the education gap in residency training between psychiatry and neuroscience. Being the cornerstone to NNCI's mission, we are proud that Dr. Insel talked specifically about our efforts to help bridge this gap. You can read Dr. Insel's blog, "Training for the Future," here: <http://1.usa.gov/1FY1pio>

## NNCI SCHOLAR SUBMISSION DUE JULY 15TH

Do you know a promising resident who is interested in medical education and has the potential to serve as one of the Ambassadors of Neuroscience and Psychiatry? Well, wait no further, the deadline for our NNCI Scholar submission is fast approaching. For more information, visit the [NNCI Scholar page here.](#)
